

# MATH 2551 D - Dr. Hunter Lehmann

- Dr. Lehmann, Dr. H, Dr. Hunter, as you prefer

## Daily Announcements & Reminders:

### Goals for Today:

Sections 12.1, 12.3, 12.4

- Set classroom norms
- Describe the big-picture goals of the class
- Review  $\mathbb{R}^3$  and the dot product
- Introduce the cross product and its properties

### Class Values/Norms:

- Mistakes are a learning opportunity
- Mathematics is collaborative
- Make sure everyone is included
- Criticize ideas, not people
- Be respectful of everyone
- 
-

**Big Idea:** Extend differential & integral calculus.

What are some key ideas from these two courses?

Differential Calculus

Integral Calculus

Before: we studied **single-variable functions**  $f : \mathbb{R} \rightarrow \mathbb{R}$  like  $f(x) = 2x^2 - 6$ .

Now: we will study **multi-variable functions**  $f : \mathbb{R}^n \rightarrow \mathbb{R}^m$ : each of these functions is a rule that assigns one output vector with  $m$  entries to each input vector with  $n$  entries.

## Section 12.1: Three-Dimensional Coordinate Systems

**Question:** What shape is the set of solutions  $(x, y, z) \in \mathbb{R}^3$  to the equation  $x^2 + y^2 = 1$ ?

**Goal:** Given two vectors, produce a vector orthogonal to both of them in a “nice” way.

1.

2.

**Definition 3.** The **cross product** of two vectors  $\mathbf{u} = \langle u_1, u_2, u_3 \rangle$  and  $\mathbf{v} = \langle v_1, v_2, v_3 \rangle$  in  $\mathbb{R}^3$  is

$$\mathbf{u} \times \mathbf{v} = \underline{\hspace{15em}}$$

**Example 4.** Find  $\langle 1, 2, 0 \rangle \times \langle 3, -1, 0 \rangle$ .
