

MA 114 Worksheet #14: Taylor and Maclaurin Series

1. (a) Suppose that $f(x)$ has a power series representation for $|x| < R$. What is the general formula for the Maclaurin series for f ?
- (b) Suppose that $f(x)$ has a power series representation for $|x - a| < R$. What is the general formula for the Taylor series for f about a ?
- (c) Let $f(x) = 1 + 2x + 3x^2 + 4x^3 + 5x^4$. Find the Maclaurin series for f .
- (d) Let $f(x) = 1 + 2x + 3x^2 + 4x^3$. Find the Taylor series for $f(x)$ centered at $x = 1$.

2. Assume that each of the following functions has a power series expansion. Find the Maclaurin series for each. Be sure to provide the domain on which the expansion is valid.

(a) $f(x) = \ln(1 + x)$

(b) $f(x) = xe^{2x}$

3. Use a known Maclaurin series to obtain the Maclaurin series for the given function. Specify the radius of convergence for the series.

(a) $f(x) = \frac{x^2}{1 - 3x}$

(d) $f(x) = x^5 \sin(3x^2)$

(b) $f(x) = e^x + e^{-x}$

(e) $f(x) = \sin^2 x$.

(c) $f(x) = e^{-x^2}$

HINT: $\sin^2 x = \frac{1}{2}(1 - \cos(2x))$

4. Find the Taylor expansion about $x = 1$ for the function $f(x) = \sin(\pi x)$, and determine the radius of convergence of the resulting series.
5. Differentiate the series in 1(b) to find a Taylor series for $\cos(x)$.

6. Use Maclaurin series to find the following limit: $\lim_{x \rightarrow 0} \frac{x - \tan^{-1}(x)}{x^3}$.

7. Approximate the following integral using a 6th order Taylor polynomial for $\cos(x)$:

$$\int_0^1 x \cos(x^3) dx$$
